Frontend Developer (ReactJS) | UI/UX Design Background | AI-Accelerated Development

ravisri4u@gmail.com | +91 99890 20921 | linkedin.com/in/ravi-g-04985a18a | https://github.com/ravisri

Professional Summary

Frontend Developer with 3 years of hands-on ReactJS development, backed by 8 years of UI/UX design experience at MSRcosmos (11 years total). Comfortable owning feature development end-to-end in Agile/git code collaboration environments — component architecture, state management, REST API integration, and responsive, pixel-perfect UI using Tailwind CSS, shadcn/ui and Bootstrap — and able to contribute to frontend architecture decisions when needed, given the underlying design-systems background. Senior-level proficiency with AI-assisted development using Cursor IDE and Claude Code (vibe coding), consistently shipping production-ready components ~40% faster. Recently added the Vercel AI SDK with TypeScript to build AI-powered features with multi-LLM integration. Looking to contribute primarily as a ReactJS developer, with the design background as a strong supporting strength.

Core Skills

Frontend Development: ReactJS (3 Years, Intermediate–Senior), TypeScript, JavaScript (ES6+), HTML5, CSS3, Component-Based Architecture, State Management, REST API Integration

AI-Accelerated Development (Senior Level): Cursor IDE, Claude Code, Vibe Coding, GitHub Copilot, Claude AI, ChatGPT

Frontend Architecture Exposure: Reusable Component Libraries, Design System Architecture, CSS Variable / Theming Architecture, Scalable UI Patterns

UI/UX Design: Figma, Adobe XD, Wireframing, Prototyping, High-Fidelity Mock-ups, Design Handoff, Design Systems

Design Systems: Design system creation and governance, design tokens (colour, typography, spacing), reusable component libraries, CSS variable / theming architecture, Figma and Claude-based design systems

Styling & UI Systems: Tailwind CSS, shadcn/ui, Radix UI, Bootstrap, Dark/Light Theme Systems, Responsive & Mobile-First Layouts

AI-Powered Features: Vercel AI SDK, LLM Integration & Multi-Model Switching

Engineering Practices & Tools: Agile/Scrum, Git code collaboration, Cross-Browser Compatibility, Performance Optimisation

Best-Fit Roles: Frontend Developer (ReactJS) · UI Developer · Frontend Developer with AI-Accelerated Workflow · Design Systems / Frontend Architecture Contributor (as needed)

Professional Experience

MSRcosmos | UI/Frontend Developer

2014 – Present (11 Years)

Hyderabad, India

Role & Responsibilities:

- Build and maintain ReactJS web applications based on project requirements, owning component development, state management and integration with live REST APIs (2022–present).

- Implement full dark/light mode and colour theme systems using CSS variables, Tailwind config and React Context across multiple enterprise products.
- Integrated the Vercel AI SDK into a ReactJS web application using TypeScript, enabling seamless switching between multiple LLM providers for AI-powered features.
- Contribute to frontend architecture decisions — component structure, reusable component libraries and theming architecture — when required by the project, drawing on a strong design-systems background.
- Accelerate development using Cursor IDE and Claude Code (vibe coding) at a senior level, describing features in natural language, refining AI-generated code and shipping production-ready components ~40% faster.
- Collaborate with stakeholders to gather and analyse project requirements before design and development begin.
- Design web applications in Figma, creating wireframes, prototypes and high-fidelity mockups presented to stakeholders for approval prior to development.
- Convert approved Figma designs into responsive HTML5/CSS3/Bootstrap and Tailwind CSS pages with full cross-browser and device compatibility (2014–2022).
- Contributed as UI/Frontend Developer on Angular-based enterprise applications (2014–2022), owning Figma design and frontend implementation before transitioning focus to ReactJS.
- Monitor and implement design changes throughout the application lifecycle, ensuring UI stays aligned with UX goals and stakeholder expectations at every sprint.
- Work within Agile sprints and a CI/CD pipeline, pulling latest code, implementing required changes per sprint, and verifying on staging before release.
- Perform cross-browser compatibility checks across Chrome, Firefox, Safari and Edge to ensure consistent rendering.
- Work closely with backend developers, QA testers and product owners to deliver seamless, scalable and visually consistent applications.
- Contributed UI design and development across 6+ internal products, including AssistPay, MailTracker, Placements, Uptick and Engage.

Key Achievements:

- Designed and delivered multiple enterprise-level web applications with modern, responsive interfaces used by hundreds of internal users.
- Reduced development cycle time by ~30% by introducing Tailwind CSS and a reusable component library across multiple projects.
- Built and maintained a company-wide design system, including components, typography, colour tokens and spacing scales, adopted across all product teams.
- Delivered pixel-perfect UI consistently aligned with business requirements, resulting in zero design rework post sign-off.
- Ensured 100% cross-browser compatibility across major applications, significantly improving end-user experience and reducing QA defect reports.
- Reduced component build time by ~40% on complex UI features by adopting Claude Code and vibe coding workflows over the last 6 months.

Education

Bachelor of Science (B.Sc.), Kakatiya University 2007

Key Projects

Vinci360 — Social Media Intelligence SaaS – Spearheaded the end-to-end frontend development of the Vinci360 pre-login web application using Next.js, shadcn/ui, and Tailwind CSS through an AI-assisted engineering workflow (Claude Design & Claude Code). Architected modular UI component systems, authored

precise technical prompts for rapid feature scaffolding, and personally audited the codebase to ensure strict WCAG 2.2 accessibility compliance and technical SEO best practices.

AI-Powered Chat Feature (Vercel AI SDK · TypeScript · ReactJS) – Integrated the Vercel AI SDK into a React application to add AI-powered chat functionality, with the ability to switch.

AI-Powered Chat Feature (ReactJS · Tailwind CSS · shadcn/ui · REST APIs · Claude Code) — Designed full UI in Figma, obtained stakeholder approval, then built an interactive real-time analytics dashboard with dark/light theme support; used Claude Code and vibe coding to accelerate component scaffolding and delivered a reusable component library adopted across multiple reporting views.

MSRcosmos Corporate Website (Figma · HTML5 · CSS3 · Bootstrap) – End-to-end ownership from requirements through Figma mockups to hand-coded, fully responsive HTML5/CSS3/Bootstrap pages, with zero layout regressions across browsers and device sizes post-launch..

Earlier Projects — UI/UX Design & Frontend Contribution (2014–2022

Ticketing Tool (Angular · Bootstrap · HTML5 · CSS3) – Designed mockups from project manager requirements, presented for approval, then converted to responsive HTML using Bootstrap framework. Contributed Angular frontend development and created mobile application mockups.

TrackEx — Travel & Expense Management (Angular · Bootstrap · HTML5 · CSS3) – Developed a unified corporate travel and expense management system — full design-to-code ownership from stakeholder requirements through to Angular-based responsive implementation including mobile mockups.

Requirement Tracker — ATS (Angular · Bootstrap · HTML5 · CSS3) – Applicant Tracking System — designed wireframes and high-fidelity mockups from stakeholder requirements, implemented responsive UI with Angular and Bootstrap, and delivered mobile application mockups alongside web version.

Additionally contributed to: **AssistPay, MailTracker, Placements, Uptick and Engage** — using ReactJS, Angular, Tailwind CSS and Bootstrap.

Strengths

- 3 years of hands-on ReactJS development with a design-systems background, able to move fast without sacrificing UI quality.
- Comfortable contributing to frontend architecture — component structure, reusable libraries, theming architecture — when a project needs it.
- Senior-level, AI-accelerated developer using Cursor IDE and Claude Code (vibe coding) to ship production-ready components ~40% faster.
- Recently added the Vercel AI SDK to build AI-powered features with multi-LLM integration inside React applications.
- Rare hybrid of UI/UX design thinking and frontend engineering — can own the full Figma-to-responsive-code pipeline independently.
- Deep experience with responsive layouts, cross-browser compatibility and Agile/CI/CD delivery workflows.

Future Goals

To grow as a ReactJS developer, deepening advanced patterns, state management and REST API architecture, while continuing to take on frontend architecture responsibility as opportunities allow. Building on a strong UI/UX design foundation and senior-level, AI-accelerated development workflow (Cursor IDE, Claude Code) and the Vercel AI SDK. Long-term goal: grow from intermediate ReactJS developer into a senior/lead frontend engineer owning both implementation and architecture.
